A history of water — and the Salton Sea — in Imperial

Imperial Valley Press | Saturday, March 21, 2020 | Page 7

By Neal V. Hitch

There is a current debate among geologists as to when the Grand Canyon was carved. Some estimate it happened about 6 million years ago. This is based on a current debate among geologists as to when the Grand Canyon was carved. Some estimate it happened about 6 million years ago. This is based on evidence that suggests the Colorado River overflowed its banks and formed a delta in the Gulf of California. This evidence indicates that the Colorado River flowed into the Gulf of California approximately 3.5 million years ago.
